DETAILED ACTION

The amendment filed on October 10, 2003 fails to comply with 37 CFR 1.121 (Notice of Non-Compliant Amendment). Status identifiers have not been properly submitted for claims 3 and 4. "(amended)" with the 1st amendment in the same claim should be replaced for (currently amended).

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-9 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8 and 11 of U.S. Patent No. 6,761,989. Although the conflicting claims are not identical, they are not patentably distinct from each other because the chemical formulation of a block copolymer in claims 1-8 and 11 of Patent 6,761,989 is directly overlapping the chemical formulation of a block copolymer in the present claims. The general structure of a block segment

having an acid group represented by the formula (1) in the present claim 1 is readable in claim 3 of Patent'989.

3. The difference between the present claim 4 and claims of Patent'989 is the requirement in the present claim 4 that the segment being free from an acid group represented by the formula (5) has an aromatic group. Claims 1-8 and 11 of Patent'989 does not claim a block having aromatic group for a non-ion-exchange segment. However, in light of the polymer electrolyte in claims 1-8 and 11 of Patent'989 having hydrophilic and hydrophobic balance for producing a polymer electrolyte, it would have been obvious to one of ordinary skill in the art to consider that a hydrophobic block having substantially no sulfonic acid group can include an aromatic group since any block being free of ion-exchange works within the same expectation for obtaining the adequate results in claims 1-8 and 11 of Patent 6,761,989.

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art US2001/0041279 is now matured into Patent 6,761,989. This reference has been discussed above.
